

Living outside of and working in boston makes having satellite radio, especially the instant weather and traffic reports all but a necessity for me and my commutes in and out of the city which are done daily! Boston traffic is one of the worst in the city and having this information available at my fingertips while driving is one of the most beneficial things i could have. When traveling across country having weather reports available for anywhere in the country at anytime is a blessing. You can not receive this info. with such ease or speed when you need it by accessing another conventional media available while in your car. PLEASE allow XM to keep broadcasting these channels for my life would be very stressful and hectic once again.

Thank you

Laura Lassi
